Even with some proven side effects, **vaccines** are **very safe** since they are usually given to healthy individuals. And the risks from the disease being prevented are always much higher than any **vaccine-associated** risk. In considering the **safety** of **vaccines**, you should look at the risks and benefits. Apr 29, 2014

**Are vaccines safe?** - Vaccine Safety - Public Health Agency of Canada

Depression in the workplace: don't ask, don't tell?
‘SPARE TIRES’ COULD COST MICHELIN EMPLOYEES

As health-care costs continue to rise, companies like Michelin are tacking on penalties to employees who fail to meet baseline requirements for health-related issues such as obesity.

April 9, 2013

NEW YORK – Employees at Michelin North America Inc. who have high blood pressure or a waistline measuring 40 inches or more may have to pay as much as $1,000 additional for health-care coverage beginning next year, the Wall Street Journal reports.
Steps we can take as a community

1. Acknowledge technology is not neutral

2. Educate colleagues and students about tech bias

3. Help set policy to require companies to provide both data and algorithmic transparency to stakeholders

4. Help develop new methods to red-team health-related software / data, etc.
