

# Can Machines Amplify Expert Humans' to Provide Care?

#### **Suchi Saria**

Assistant Professor of Computer Science, Statistics, Biostatistics, and Health Policy

Malone Center for Engineering in Healthcare, Johns Hopkins University

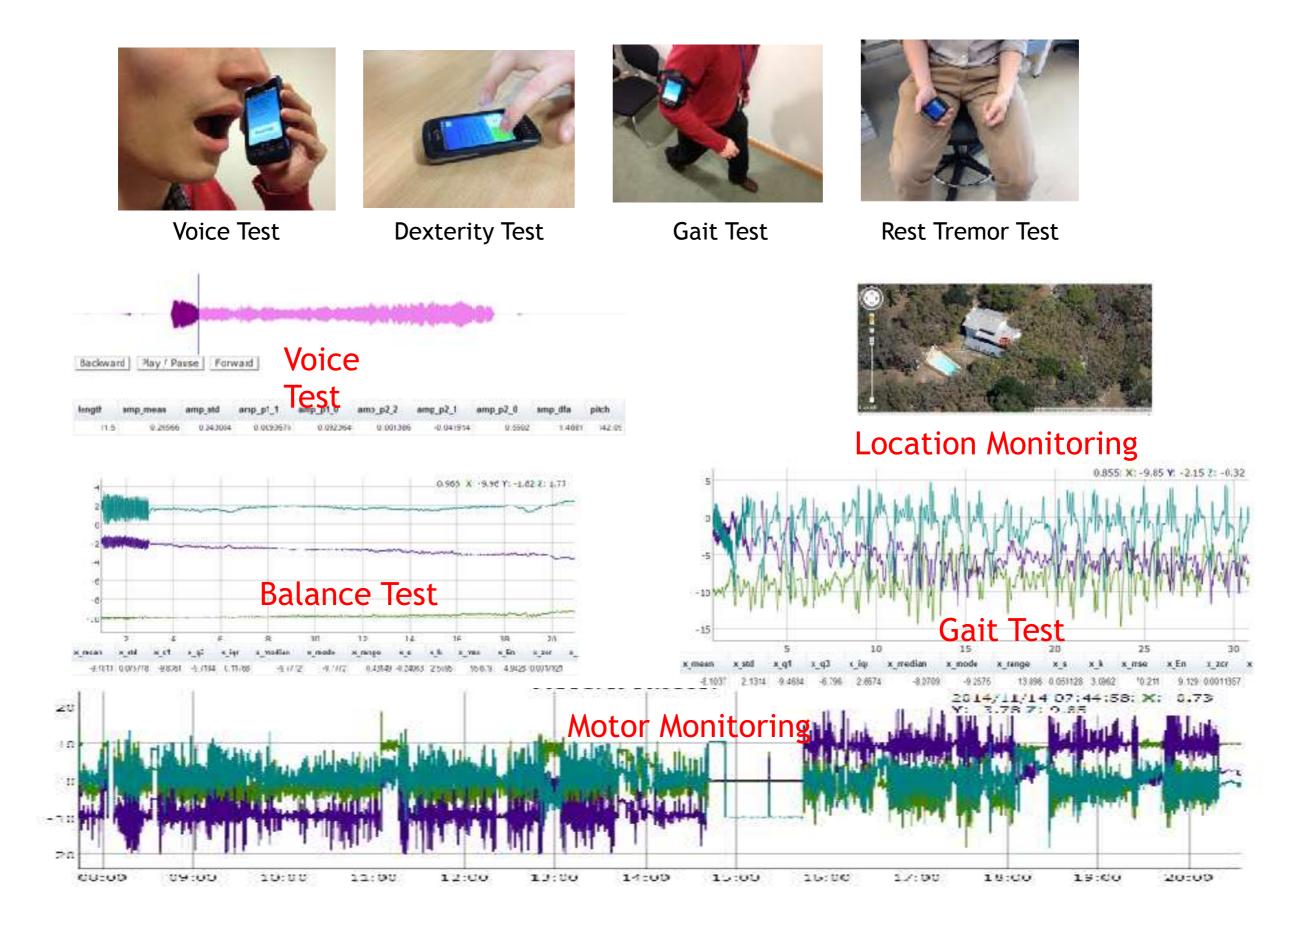

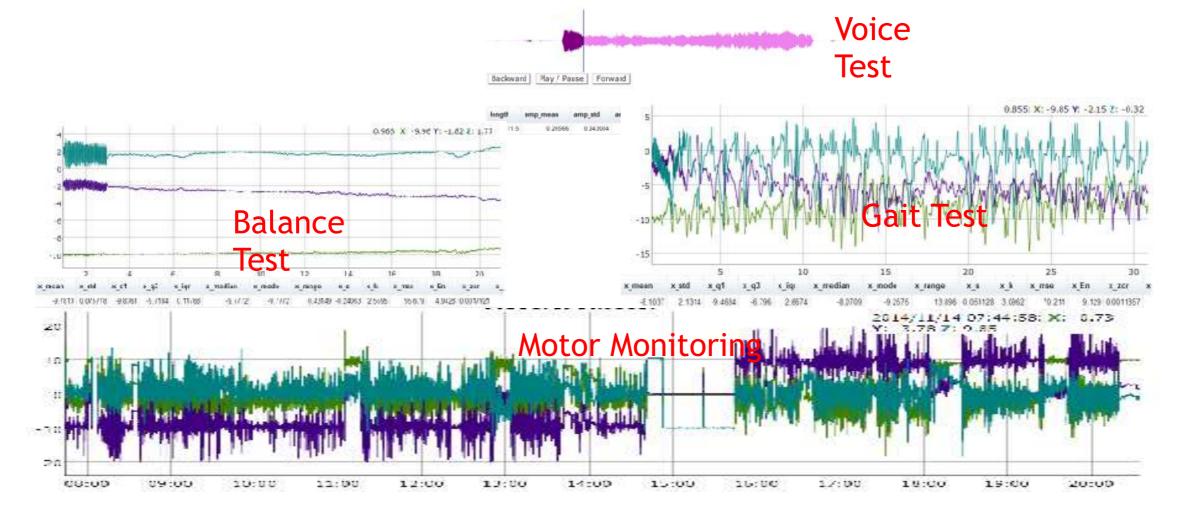

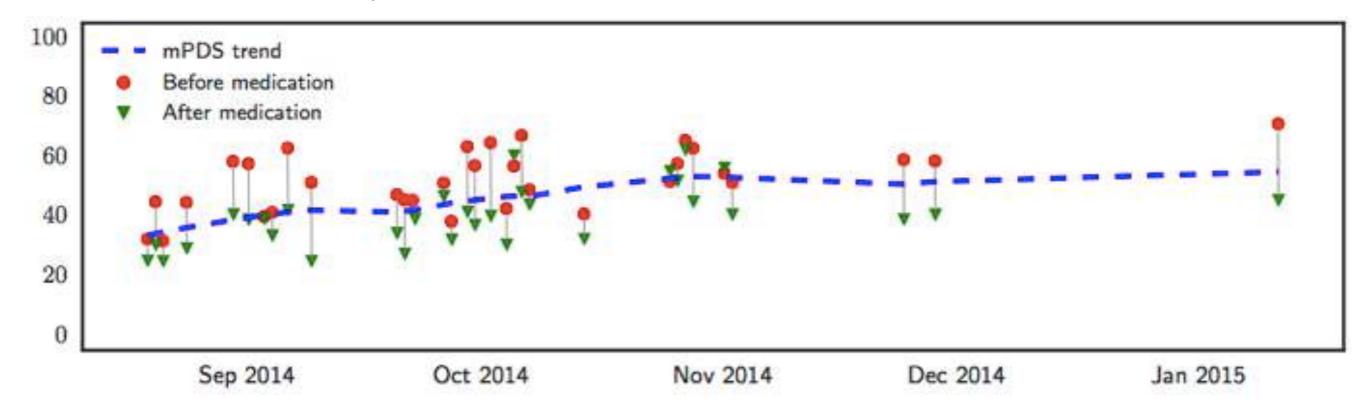

## Home Monitoring for Parkinson's Disease?

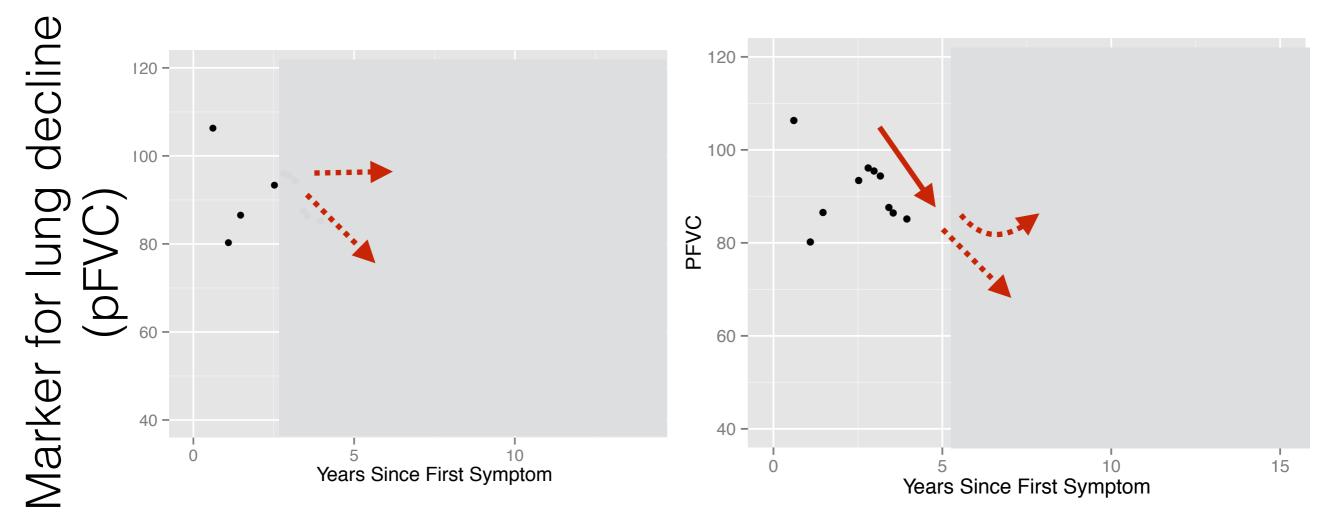

Intraday severity fluctuations captured using a mobile phone for a patient with 11 years of PD who worsened over 6 mths.

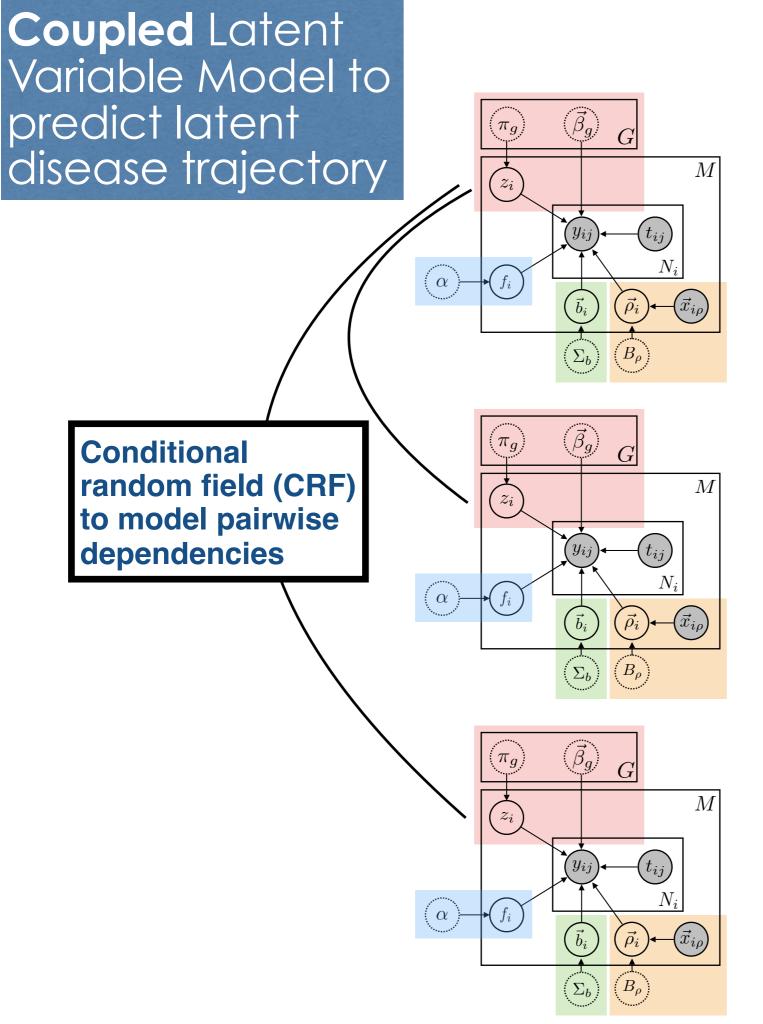

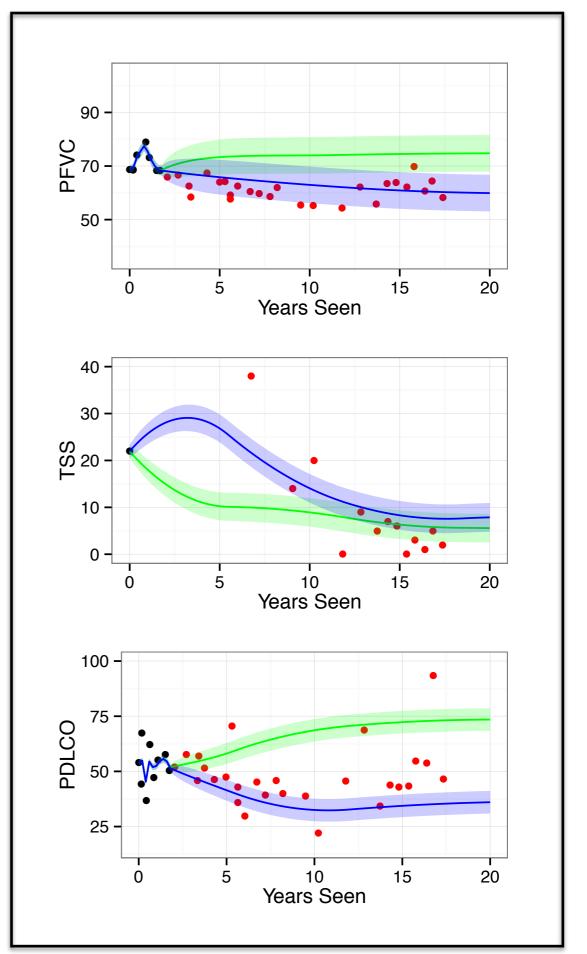

### Should we administer immunosuppressants, which can be toxic?

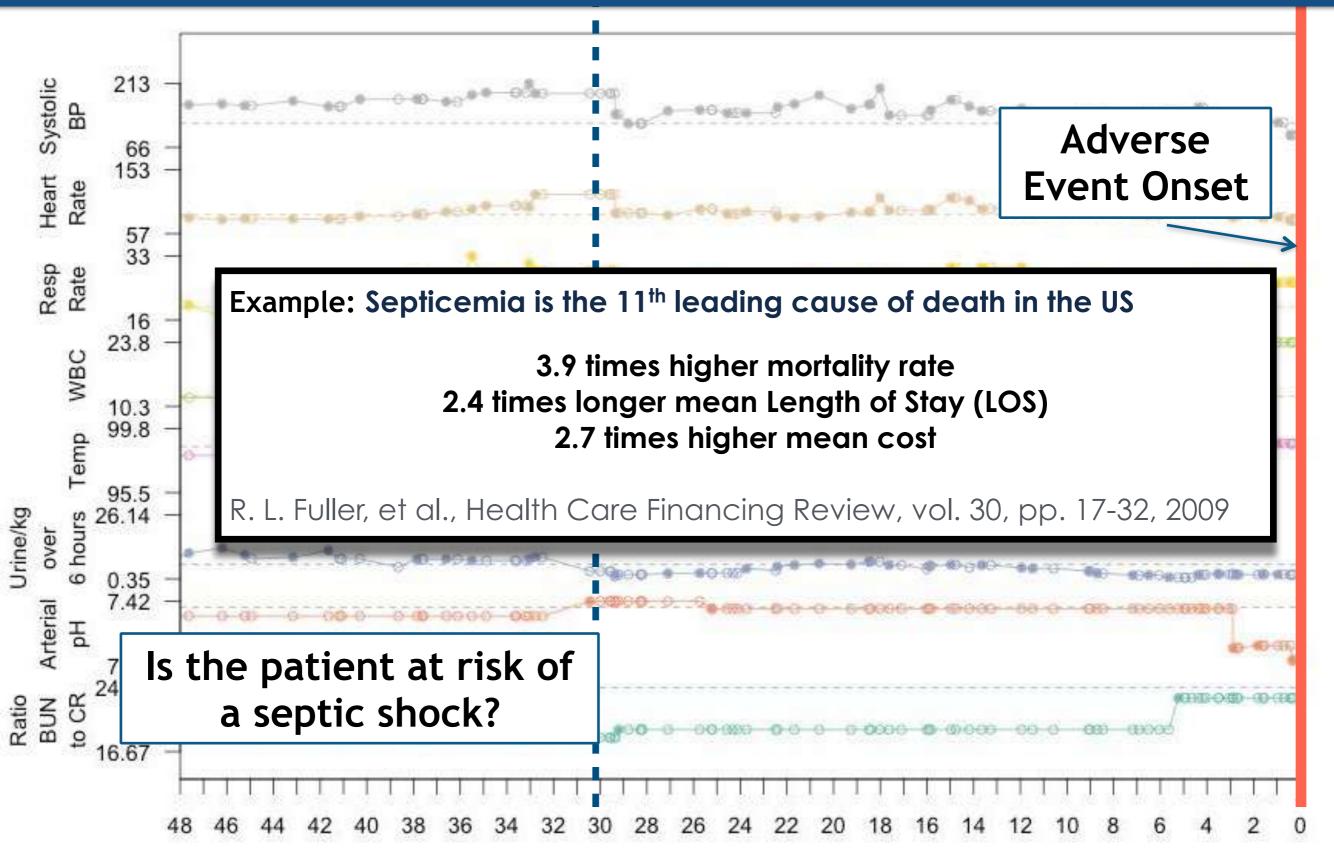

Affects 300K individuals; 80 other autoimmune diseases — lupus, multiple sclerosis, diabetes, Crohn's — many of which are systemic & highly multiphenotypic.

# Early Warning Systems for Potentially Preventable Conditions?

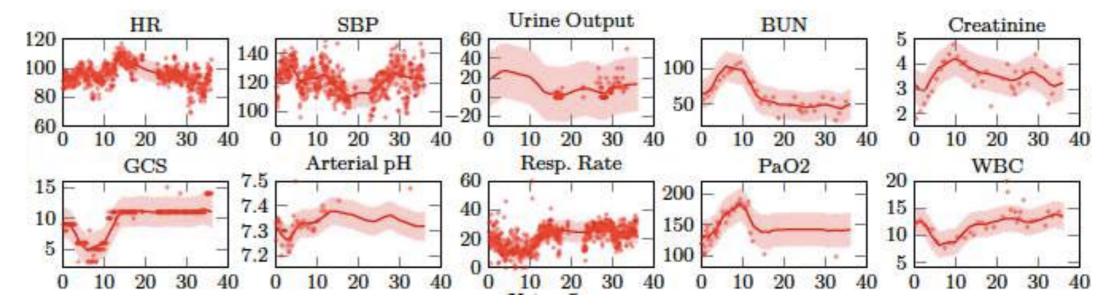

## Scalable Joint Modeling for Reliable Event Prediction

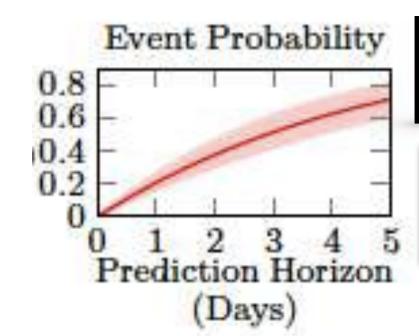

**Septic Shock** 

Joint Model of Trajectory and Event Data

Patients w/ shock identified a median time of 25 hours prior to shock onset.

At higher sensitivity, increase in the Positive Predictive Value from 6% to 50%

Henry et al., Science TM 2015

Soleimani, Hensman, Saria. TPAMI 2017

## Making Inferences available to providers

- Every hospital EMR is slightly different: data wrangling technologies to account for differences
- Monitoring every patient: flexible scalable inference and fault tolerant distributed computation
- Enabling providers to reason w/ model: joint humanmachine reasoning
- Many other open questions:
  - How do we communicate when to trust and when not to trust the resulting computation?
  - How do we understand and estimate the different sources of error?

# Electronic Health Data

From 2008 to 2014, hospitals with EHRs rose to 75% from 9%, and in doctors' offices rose to 51% from 17%.

#### \$32+ billion effort went into digitization. Benefits?
