Stable individual differences in number discrimination in infancy
Elizabeth M Brannon (2010)
Previous studies have shown that as a group 6-month-old infants successfully discriminate numerical changes when the values differ by at least a 1:2 ratio but fail at a 2:3 ratio (e.g. 8 vs. 16 but...

Cultural transmission of social essentialism
Marjorie Rhodes (2012)
Social essentialism entails the belief that certain social categories (e.g., gender, race) mark fundamentally distinct kinds of people. Essentialist beliefs have pernicious consequences, supporting...

Language, cognitive, and socio-emotional skills across the first 6 years in U.S. children from African-American, Dominican, Mexican, and Chinese backgrounds
Catherine Tamis-LeMonda
This project is a longitudinal study of language, cognitive, social, emotional, and gender development from infants' birth through various critical transitions to schooling (preschool, kindergarten,...

Development of infants' attention to faces during the first year
Michael C. Frank (2009)
In simple tests of preference, infants as young as newborns prefer faces and face-like stimuli over distractors. Little is known, however, about the development of attention to faces in complex...

Training the Approximate Number System Improves Math Proficiency
Elizabeth M Brannon (2013)
Humans share with nonhuman animals an approximate number system (ANS) that permits estimation and rough calculation of number without symbols. Recent studies show a correlation between the acuity of...

The development of predictive processes in children's discourse understanding
Michael C. Frank (2013)
We investigate children's online predictive processing as it occurs naturally, in conversation. We showed 1-7 year-olds short videos of improvised conversation between puppets, controlling for...

Language, cognitive, and socio-emotional skills across the first 6 years in U.S. children from African-American, Dominican, Mexican, and Chinese backgrounds

▼ DESCRIPTION

This project is a longitudinal study of language, cognitive, social, emotional, and gender development from infants' birth through various critical transitions to schooling (preschool, kindergarten, 1st grade). Children came from diverse backgrounds (African-American, Dominican, Mexican, Chinese) and lived in the New York City metro area. Videos were recorded during various activities and tasks specific to each observation age (e.g., book reading, mother-child free play, novel toy, familiar toy at the 14-month visit) in children's homes or in the laboratory at 14, 24, 36, 52, 64, and 76 months of age.

As a member of the Databrary community, you promise to:

1. Treat Databrary data with the same high standard of care that you treat data collected in your own laboratory.
2. Respect participants' wishes about sharing their data just as you do in your lab.
3. Take care in authorizing other people (affiliates and collaborators) and take responsibility for their conduct and use of Databrary data, just as you do in your own lab.

DATABRARY ACCESS AGREEMENT

*This document is also available as
.pdf or .md.*

Databrary Access Agreement

The undersigned Institution wishes to allow its Authorized Investigators identified in Annex II ("Authorized Investigators") to access Databrary.

Databrary is a web-based data library housed at New York University designed for sharing developmental and behavioral data, including video files and associated metadata. Authorized Investigators have both contributor and user privileges to all shared data in the library. However, many uses of Databrary do not involve contributing data or conducting research on shared data. IRB approval is not required for access to Databrary; however, IRB approval is required to contribute personally identifiable data to be shared through Databrary or to conduct research on data obtained through Databrary.

By signing this Access Agreement, effective as of the date entered below, both the Institution and Authorized Investigators hereby agree to its terms, including those found in the attached Annex I, and hereby acknowledge receipt of and agree to be bound by the [Databrary Access Guide](#), including the [Statement of Rights and Responsibilities](#) for Databrary, for Institutions, and for Investigators, including those provisions regarding the contribution and use of data by Authorized Investigators and the Institution. The Databrary Access Guide may be amended from time to time. In addition, the Institution and Authorized Investigators hereby agree to use Databrary and data obtained through it exclusively for the purpose of scientific research or education under an academic, research, government, health, or commercial entity (but in the last case, solely for non-commercial purposes).

You can also download a [docx](#) version of this file.

Databrary Release for [STUDY NAME]

What we are asking

This form requests your permission to share material from this session in a secure, web-based data library called Databrary (databrary.org). Material from this session may include video/audio recordings, photographs, and images; other information such as age, birth date, sex, ethnicity, education, and self-reported health information; and information supplied by researchers who analyze data from this session. The library allows only authorized researchers to have access to shared information. Data sharing will lead to faster progress in research on human development and behavior.

If you agree to share your data, this form also requests permission to allow authorized Databrary researchers to show selected video excerpts and images from recordings of this session for scientific presentations and/or informational and educational purposes, but never for commercial purposes. Giving permission to share your information in Databrary is separate from consenting to participate in a research study. You do not have to give permission to share your information in the library. You can agree to share your data, but not agree to allow researchers to show excerpts and images. Your choices will not affect receipt of payment if offered for participation in this or future studies.

Benchmarks

- Private beta April 2014
- Public release October 2014
- ~120 authorized PIs, 68 institutions (U.S., Canada, Europe, Australia, S. America)

Findings

- Identifiable data *can* be shared with permission
- Must reduce barriers to sharing, discovery
- Active curation; searching across/within videos
- *Require* minimal metadata, but *enable* expansion/standardization & crowd-sourcing
- Community building/engagement essential
